

COURSE SPECIFICATION DOCUMENT

Academic School / Department:	Richmond Business School
Programme:	Accounting & Finance Business Management: Entrepreneurship Business Management: International Business Computer Science Digital Marketing Economics Fashion Marketing & Management Finance & Investment International Sports Management
FHEQ Level:	3
Course Title:	Functions with Applications
Course Code:	MTH 3111
Total Hours:	120
Timetabled Hours:	45
Guided Learning Hours:	0
Independent Learning Hours:	75
Credits:	12 UK CATS credits 6 ECTS credits 3 US credits

Course Description:

This course is designed to provide students with the necessary mathematical background for calculus courses and its applications to some business and economics courses. It covers the fundamentals of real-valued functions, including polynomial, rational, exponential and logarithmic functions and introduces students to the concepts of derivative and integral calculus with its applications to specific concepts in micro- and macro-economics.

Prerequisites:

MTH 3000 Fundamentals of Mathematics or Placement Test Score

Aims and Objectives:

The aim of this course is to provide the necessary mathematical skills for more advanced mathematics courses as well as some business and economics courses and to give students the opportunity to investigate a range of mathematical applications, including business, economics, and the social and life sciences.

Programme Outcomes:

Accounting and Finance: B2, C1, D2, D3

Business Management: A1, B1, C1

Computer Science: A2, B5, B6, C2

Digital Marketing: A1, B1, C1

Economics: A1, B1, C1

Fashion Marketing and Management: A1, B1, C1

Finance and Investment: A1, B1, C1

International Sports Management: A1, B1, C1

A detailed list of the programme outcomes is found in the Programme Specification. This is maintained by Registry and located at: <https://www.richmond.ac.uk/programme-and-course-specifications/>

Learning Outcomes:

By the end of this course, successful students should be able to:

- Have an understanding of the fundamental concepts of algebra including exponents and radicals; factorising polynomials and solving inequalities.
- Have an understanding of functions and be able to solve standard problems using a library of functions.
- Have an understanding of graphs of functions and be able to graph different types of functions.
- Have an understanding of simple derivatives and integration and its application.
- Have an understanding of how the concepts of functions apply in a Business and Economic context.

Indicative Content:

- Exponents and radicals; factoring polynomials
- Solving linear and non-linear inequalities
- Functions: transformation; combination; composition and inverse
- Graphing of functions
- Quadratic, rational, exponential and logarithmic functions
- Exponential and logarithmic equation and models
- Derivatives and integration with applications to Business and Economics

Assessment:

This course conforms to the University Assessment Norms approved at Academic Board and located at: <https://www.richmond.ac.uk/university-policies/>

Teaching Methodology:

Course material is presented and analysed in the following ways:

- a) Formal presentation of topics and worked exercises.
- b) Self-learning assignments and directed mathematical exercises.

- c) Participation in individual and group investigations.
- d) Where appropriate, students will be introduced to solution aids, such as handheld calculators, mathematical tables and computer software.

Indicative Text(s):

Larson, Ron “Precalculus” CENGAGE Learning, 10th Edition, 2017.

Franklin Demana, Bert Waits, Gregory Foley, Daniel Kennedy and Dave Bock. “Precalculus: Graphical, Numerical, Algebraic” Pearson, 9th Edition 2015.
