COURSE SPECIFICATION

Academic School/Department:	Communications, Arts and Social Sciences	
Programme:	Psychology	
Level:	6	
Module Title:	Cognitive Neuroscience	
Module Code:	PSY 6425	
Module Leader:	Dr. Ira Konstantinou	
Student Engagement Hours:	120	
Lectures:	30	
Seminar / Tutorials:	15	
Independent / Guided Learning:	75	
Semester:	Spring	
Credits:	12 UK CATS credits 6 ECTS credits 3 US credits	

Course Description:

Cognitive neuroscience aims to explain cognitive processes and behaviour in terms of their underlying brain mechanisms. It is an exciting and rapidly developing field of research that straddles the traditional disciplines of psychology and biology. Cognitive neuroscientists take the view that knowledge about the fundamental mechanisms of the nervous system can lead to a deeper understanding of complex mental functions such as decision-making, schizophrenia, pain, sleep and memory. The course will emphasise the importance of combining information from cognitive experimental designs, epidemiologic studies, neuroimaging, and clinical neuropsychological approaches to understand cognitive processes. The first half of the course will offer a wider-range of current research topics. The latter part of the course will focus on the Faculty research specialisms to potentiate students' experience and learning. *To put it simply: how does the brain think?*

Prerequisites: PSY 4205 and PSY4215

Aims and Objectives:

This course is designed to provide an overview of current cognitive neuroscience topics and serve as an introduction to a burgeoning field of research. Lectures will introduce topics in

cognitive neuroscience such as current trends and interests of cognitive neuroscience; how to conduct research; neuroethics; decision-making; schizophrenia; pain; memory and; dementia. Students are expected to develop a sound understanding of cognitive neuroscience's strength and limitations.

Programme Outcomes:

4Ai, 4Aiii, 4Ci, 4Ciii, 4Dii, 4Diii

A detailed list of the programme outcomes is found in the Programme Specification. This is maintained by Registry and found at: <u>https://www.richmond.ac.uk/programme-and-course-specifications/</u>

Learning Outcomes:

- summarise and critique ideas and debates in the field
- conduct independent research in cognitive neuroscience
- demonstrate a clear understanding of the impact and limitations of cognitive neuroscience approaches

Indicative Content:

- Research tolls: ePrime & EEGLab
- Decision-Making
- Neuroethics
- Schizophrenia
- Pain
- Sleep
- Short-term memory
- Hippocampal memory encoding
- Long-term memory encoding
- Developmental amnesia
- Alzheimer's detection

Assessment:

This course conforms to the University Assessment Norms approved at Academic Board.

Teaching Methodology:

The course material will be covered in the following ways:

- I. Lecture presentations with the key concepts
- II. Group discussions on journal articles and important questions on the topics discussed
- III. Internet sites related to psychology
- IV. Intra-net access to lecture notes and reading material

Indicative Texts

Gazzaniga, MS (2013) *Cognitive Neuroscience: The Biology of the Mind.* New York, NY [u.a.]: Norton.

Purves, D (2013) *Principles of Cognitive Neuroscience*. Sunderland, Mass.: Sinauer. Ward, J (2010) *The Student's Guide to Cognitive Neuroscience*. Hove, East Sussex; New York: Psychology Press.

Please Note: The core and the reference texts will be reviewed at the time of designing the semester syllabus
